## COMMENTS TO AUTHORS

The paper shows that the use of lower doses of fenofibrate in combination with resveratrol to protect the liver from fructose induced hepatic steatosis and damage. The paper offers an interesting analysis, and is well organized for the publication. Minor compulsory revisions: 1.The result part should be more clear organized. P value should be added for comparison between the groups. 2. There were some small writing mistakes that should be corrected before being published,e.g. format of references.
