COMMENTS TO AUTHORS

This is a short contribution in the form of a case report. Some minor changes: First sentence: delete in industry: i.e. Compressed air has been generally used since the beginning of the twentieth century for various applications. Second page: About 2 hours before his arrival to hospital a colleague placed, as means of a practical joke, a compressed air nozzle 10 cm distant from his anus. Roentgenograms taken X-rays taken to relieve the tension within the pneumoperitoneum

COMMENTS TO AUTHORS

I would like the authors to comment the following: 1. What keywords were used for Pubmed search? 2. What were the indications for computed tomography if the diagnosis was clear based on complaints, anamnesis, physical examination and X-rays? 3. What was the type and extent of peritonitis? 4. Why was ileostomy performed?
