COMMENTS TO AUTHORS

As the authors indicated, the timely and accurate evaluation of TACE efficacy and early detection of active residual lesions and recurrent or metastatic lesions are of great clinical significance. In this manuscript, the authors assessed the value of gemstone spectral imaging in HCC after TACE treatment. The study is well designed and the results are interesting. 1 The IRB and other statements should be included in the manuscript. Please check. 2 Language polishing needed. 3 Please check the references list.
