COMMENTS TO AUTHORS

The article may benefit from the followings 1. more information about the follow-up of the case after resection of the metachronous metastases. Any detection of metastases in other organs 2. The patient is relatively young. is there any family history of colon cancer. Is this a case of HNPCC. Can microsatellite instability be performed ? 3. The following article give a picture of the prevalence of colorectal cancer in adrenal metastases in both autopsy and biopsy series. Around 5% of metastases are from large intestinal primary in an Asian series. It should be included in the discussion. Lam KY, Lo CY. Metastatic tumours of the adrenal glands: a 30-year experience in a teaching hospital. Clin Endocrinol (Oxf). 2002 Jan;56(1):95-101. Review. 4. A review of the prevalence of solitary adrenal metastases from colon primary should be mentioned. It is better to have a table on that. 5. Also, any information on the metachronous adrenal metastases in the literature ?
