COMMENTS TO AUTHORS

This paper shows that the amount of poorly differentiated tumor cells within mixed type early gastric cancer is correlated with the risk of lymph node metastasis. They emphasize the need for diligent histological characterization of patient specimens as conclusion. Their findings are interesting and useful for the future treatment of early gastric cancer. I just recommend one sentence be changed. Page 8, rows 14-15, '....., suggesting that mixed-predominantly diffuse EGC should be as stringently managed as diffuse-type EGC' should be '....., suggesting that mixed-predominantly diffuse EGC should be more stringently managed than pure diffuse-type EGC'.
