### COMMENTS TO AUTHORS

This manuscript is very interesting, and the case is rare. In this manuscript, the authors reported a case of small bowel obstruction with acute peritonitis. Abdominal cocoon syndrome is a rare disease with portion or all abdominal organs wrapped in dense membrane-like fibrous tissue. In this case, the patient had a history of overeating before hospitalization, but did not have history of chronic systemic disease or abdominal trauma. The authors team successfully treated this patient which was secondary to idiopathic ACS with unilateral abdominal cryptorchidism and greater omentum hypoplasia. Only Some language polishing need to be corrected.
