### COMMENTS TO AUTHORS

This review paper has summarized data from abdominal symptoms, diagnostic methods and data from gut microbiota in oncology children with digestive infections. This is a very well done paper. I only found a few and minor English mistakes ("hemorrhage", "hemorrhagic", "occur", "ad coworkers" , "typically", "at leas", "abudance", "endogeneous"). In Table1, neutrophil counts are expressed in different units ("5 X 108/L" "0.5 X 109/L" "500/mcL" "500/mm3") depending on the bibliographic reference. The comparison of results from different references will be easier whether the same unit is used (for example "500/mm3"). A lot of text is included in Table 3. The results expressed in this table can be included and summarized in the text of the microbiota section in Result.

### COMMENTS TO AUTHORS

In this study, authors have edited the review on the evidences, diagnostic criteria and results of gastrointestinal and liver infections in children suffering from oncologic diseases. This study has achieved to present the factors contributing to infections and the procedures improving quality of life with exact diagnosis and prevention. However, there are some spelling mistakes in English text like "in cancer children; in oncology children; usefull ; typically; at leas ; in oncology pediatric patients; sincenosographic definitions; in 88/10197 acute leukemia children; thresold ". It should be corrected.
