COMMENTS TO AUTHORS

Multidrug resistant organisms and emergence of new strains of *Clostridium difficile* are becoming increasingly significant with solid organ transplants. Authors should comment in further in more detail on this emerging issue. Authors should comment on emerging modalities of treatment, including fecal microbial transplants.

COMMENTS TO AUTHORS

I read with interest the manuscript entitled "Role of Selective Intestinal Decontamination for the Prevention of Early Bacterial Infections After Liver Transplantation" by Elena Resino et al. The manuscript is well written and important in its field of investigation. The Authors should emphasize the clinical importance of their comparative analyses and better explain the sentence "Further randomized controlled studies evaluating SID strategies are warranted, preferably analyzing non-absorbable antimicrobials or non-antibiotic products which carry a theoretical lower ecological deleterious effect." Some orthographical and grammatical errors have been found throughout the manuscript. Tables should be indicated as 1, 2, 3 and 4.
