COMMENTS TO AUTHORS

Supplementary table: "The dysregulation of lncRNAs in gastric cancer" LncRNA in the title is not adequate. In the same Tables there are many data regarding miRNAs but a limited number of lncRNA, please added some data regarding lncRNA involved in gastric cancer, or alternatively group miRNAs and lncRNA in separate two lists or figures (es Table 1 lncRNA and suppl. miRNAs).

COMMENTS TO AUTHORS

This review is well written, summarizing the current status of noncoding RNAs in gastric cancers. However, several typos are appeared. Thus, before final accept this manuscript should be edited by native tongues of English. minor comments; 1. page 4 second sentence; 'diverse RNAs' should be better than 'a diversity of RNAs'. 2. page 7 second sentence; 'circuit' might be better than 'circulating regulation'. 3. page 9 first paragraph; up-regualted should be up-regulated. There are additional other typos in the manuscript.

COMMENTS TO AUTHORS

The manuscript by Shanshan Xie and co-workers reviews the role of non-coding RNAs in gastric cancer. Current data regarding the role of miRNAs and lncRNAs in gastric tumor growth, invasion, metastasis and tumor microenvironment and the possibility of miRNAs and lncRNAs as potential biomarkers or therapeutic targets for gastric cancer are discussed. This is a well-written, comprehensive, and up-to-date review regarding non-coding RNAs in gastric cancer. There are a few minor points: ? The authors should focus less on their own recent work. ? There are some recent reviews regarding this topic that should be cited, e.g. PMID: 25659765; PMID: 25998522. ? A few typographical and grammatical errors should be corrected.

COMMENTS TO AUTHORS

This is a good review on the roles of non-coding RNAs in the development and progression of gastric cancer. The authors also summarize the potential applications of noncoding RNAs in the diagnosis, prognosis, and treatment of gastric cancer. I feel that the review should be interesting to the field.
