COMMENTS TO AUTHORS

The paper describes diagnostic and therapeutic workup of one patient suffering from extrahepatic cholangiocarcinoma (cT4N1M0) for the interval up to seven months post surgery. The paper provides state-of-the art imaging and methodology and addresses the importance of interdisciplinary approaches. Image quality is excellent, especially figures 3 and 4, respectively. Minor comment: If the authors would be able to moderately reduce the frequency of the terms "rare" and "very rare" message and conclusion would not be harmed.
