### COMMENTS TO AUTHORS

The proposed review is an expression of long lasting aspirations and expectations of transplant community about the possibility of achieving transplant tolerance to solid organ allograft. The article discusses a wide variety of aspects of the immune response and immune tolerance to liver transplant. It seems to be a very interesting element in the discussion about the phenomenon called "operative tolerance". I would propose to mention the danger associated with end stage liver graft failure that may be the consequence of attempts of reduction or discontinuation of immunosuppression. There is no long-term therapeutic alternative for this condition, unlike in the course of stage renal disease. The article contains also a very large number of references cited. There are some punctuation errors requiring corrections.

### COMMENTS TO AUTHORS

Quite nice review of the mechanisms and clinical interest of tolerance induction in liver transplantation. I recommend to require the assistance of a native English speaker to improve the quality of the manuscript.
