### COMMENTS TO AUTHORS

This is a well written review on the relation of IFN-based and IFN-free antiviral therapies and HCV-associated NHLs. The topic is of important clinical merit. All the crucial studies are discussed in detail, the results are commented in a moderate, critical way. I suggest to accept the article in its current form.

### COMMENTS TO AUTHORS

The authors have written an excellent review on what is going to be an important topic in hemato-oncology. I have no comments except that there is a need for minor language review.
