COMMENTS TO AUTHORS

This systematic review analyzed therapeutic approaches of PB based on classification and characteristics of PB. Firstly, the authors concisely reviewed the pathogenesis, diagnosis, classification, clinical manifestations and natural history of PB. Then they mainly focused on therapeutic approaches of PB including endoscopic, radiological and surgical modalities. The methods, outcome, and complications of different interventions were assessed and combined therapy was discussed in detail. Finally, the authors presented an algorithm for management of PB. In general, this review described all available therapeutic approaches for PB and analyzed the advantage and disadvantage of various modalities. This paper presented useful information to practical physicians who deal with patients with PB. Unfortunately, only one database was used to search relative literature in this review and this strategy may lead to omission of literature. A flow chart of literature search should be added.

COMMENTS TO AUTHORS

A well written review on a subject which has been discussed in other journals recently.
