COMMENTS TO AUTHORS

the editorial is very good , but the reader is waiting for more concrete advices to introduce and apply in their clinical practice . At the conclusion, it would be more clear to find a more nitid author's statement about to quit PPI treatment in patients with normal risk of upper gastrointestinal bleeding and some clinical relevant event of LGB experienced before . I would hope some statement about adding probiotics in these patientes with PPI , and which kind of them

COMMENTS TO AUTHORS

1. Comprehensive review of PPI and lower GI bleed 2. A lot of spelling and grammar errors 3. Some sentences do not make sense for example last sentence in page 7 - "Due to the intrinsic nature of observational studies, the finding was explained as probably due to a confounding by indication effect". The authors may want to rewrite to make it clearer what they are trying to get at

COMMENTS TO AUTHORS

Awesome review article. Only minor spelling adjustments are needed.
