COMMENTS TO AUTHORS

The article is aimed to assess the current status of robotic flexible endoscopic platforms designed for advanced endolumenal procedures. The title is "The Application of Robotics in Gastrointestinal Endoscopy - a Review". 1. Unfortunately, the authors did not show the cost-effectiveness of the robotics. 2. It might be a valuable review if the authors also summarize these details into the "Table". 3. Finally, the authors should to recommend the readers "How to apply this knowledge for clinical practice?".

COMMENTS TO AUTHORS

Title: Application of robotics in gastrointestinal endoscopy-a review. The authors indicated a current review of the robotic flexible endoscope platforms. This manuscript is very interesting and well written. However, I feel there are some problems in this article. (1) Results and Discussion are very interesting. However, they are slightly rambling talk in each paragraph. The author should change these paragraphs more compact and brief. (2) Author should indicate a figure legend of Figure 1. (3) Author should add the "(Figure 4)" in the paragraph of Neoguide. (4) Author should add the "(Figure 7)" in the paragraph of CUHK double balloon endoscope. (5) Author should indicate a figure legend of Figure 8. (6) Author should add the "(Figure 14)" in the paragraph of Other prototypes.
