COMMENTS TO AUTHORS

In this study, the authors demonstrated that IL-22 is a valuable factor for hepatocyte proliferation and can protect liver from injury induced by ConA. The work is well-done and provides the interesting results. However, there are several aspects the authors should revise. 1. Abstract should be polished. 2."AFPmRNA", "AFP mRNA" 3.ConA+PHX group, fig3, what about necrosis area? necrosis should be quantity. 4.Hepatocyte proliferation partial hepatectomy showed in fig 4B,the results seem to be not significant.
