COMMENTS TO AUTHORS

This manuscript is a literature of the application of elastography in IBD diagnosis. The authors first briefly reviewed the performance of available imaging modalities on IBD and stated that elastography could be a next breakthrough of imaging based IBD diagnosis. The authors afterwards explained how the elastography works. The stain elastography studies to assess fibrosis in TNBS model and shear wave speed imaging in human subjects was described in detail. The other potential applications and shortcomes of elastography in IBD were also discussed. The manuscript is overall comprehensive and concise. The reviewer would recommend the publication of the manuscript with no reservation.

Congratulations for the quality of yours work. In our opinion a prospective study in patients complaining of pain in the abdominal left lower quadrant would be useful for a better comprehension of Crohn's disease. We are favorable to the publication of the manuscript
