COMMENTS TO AUTHORS

#Reviewer 1 In this case report authors revealed for the first time protein-losing enteropathy (PLE) localized in colon. Moreover, they confirmed by few methods, the diagnosis of PLE in this case report. The case report is sufficiently novel and also interesting. The study design and conduct are described in appropriate manner based on appropriate protocol and methodology. There are following issues requiring authors' attention: - Check the spelling and grammar. The text is missing letters. - page 6, first paragraph replace "popuations" with population - page 6, second paragraph replace "perjodic" with periodic The reviewer suggests that the paper in its current form should be accepted after minor revisions.

COMMENTS TO AUTHORS

This is an interesting case report. The typical endoscopic features of cap polyposis, namely the polyps, are not present even with more classical histological findings. Therefore, could this case actually represent a variant of CP? There are some minor grammatical errors throughout. See file below for all comments.

COMMENTS TO AUTHORS

I commend the authors for their hard work and the patient has finally been treated well. Pseudomembranous colitis is usually caused by Clostridium difficile. It can happen following prolonged or multiple use of antibiotics. However, there is no such evidence in this case. It will be interesting to investigate the gut microbiota in this patient. What bacterial species are changed? Has the patient ever been given probiotics and what is the effect? Periodic is mis-spelled "perjodic acid-Schiff (PAS)".
