### COMMENTS TO AUTHORS

Only minor comments and revisions: Please correct safely into safely in the title. In the introduction, mention the situation in Europe instead of the USA, or both.

### COMMENTS TO AUTHORS

World Journal of Gastroenterology Liver transplantation is an optimal radical therapy for selected patients with hepatocellular carcinoma. The stringent organ allocation system has been safely and effectively expanded by alternative sets of expanded criteria, such as University of California, San Francisco (UCSF), University Clinic of Navarra (CUN), Valencia and Hangzhou criteria. This study review the common criteria for liver transplantation. There are some problems for this version. 1. The study presented many criterion, but missed some important one, such as Hangzhou criteria which include vital markers of biological aggressiveness: alpha-fetoprotein, differentiation (2016. "Liver transplantation for hepatocellular carcinoma beyond the Milan criteria." Gut 65: 1035-1041). 2. The title "Liver transplantation for intermediate hepatocellular carcinoma: can we safely expand up-to-seven criteria?" may not reflect the content of text, up-to-seven criteria isn't the core message since the main emphasis of this manuscript sits on "adaptive approach". 3. The paper does not read well overall. The authors would benefit significantly from a professional English writer/reviewer.
