		<input checked="" type="checkbox"/> No	

### COMMENTS TO AUTHORS

Paper is well written. There exists a good deal of variability in the use of manual regions of interest for ADC measurements. Additionally, averaging ADC values among lesions of varying sizes may not provide accurate measurements. An automated program is ideal. Clarification is needed on the dates of the preoperative MR examinations. The paper indicates that the preoperative MR examinations were performed between June 2013 and December 2016 (in the future).
