COMMENTS TO AUTHORS

The current manuscript would like to create a standard liver volume and vascular structure in adult Chinese. Two comments here: 1. Age is a major impact factor in liver volume measurement. Ten-year interval interpretation for the liver volume measurement may be a better presentation if possible. 2. Couinaud's segment of liver is a useful anatomical geography for resection guides of the tumor resection or location. The author may try to apply the current data to measure of the liver volume with the Couinaud segment individualize from segment 1 to segment 8.
