**COMMENTS TO AUTHORS**

Thank you for giving me the opportunity to review the manuscript " Myo-inositol reduces  $\beta$ -catenin activation in colitis". The information given in the manuscript is informative but need some minor revision before any publication consideration. My comments are as follows: 1.line343, NCM cells treated with 10ng/ml TNF showed a 60% increase in  $\beta$ -catenin 343 activation,Please add one reference in support of your statement here 2.line361, This small sample size impaired statistical interpretation; yet, analysis of collected tissue proved valuable,what is the meaning of this sentence which is saying that the 3patient's tissue can proved. With what and why?
