COMMENTS TO AUTHORS

The study is well designed, and the results are interesting and support the conclusion. A language revision is required.

COMMENTS TO AUTHORS

Very interesting statistical method. The authors established a classification method for differential diagnosis of colorectal ulcerative diseases, especially Crohn's disease (CD), primary intestinal lymphoma (PIL) and intestinal tuberculosis (ITB). Confirmed cases of CD, PIL and ITB inpatient medical record database have been searched. The test set consisted of 77 CD, 30 PIL, 23 ITB and 140 cases of other diseases obtained from the endoscopy database. And 74 cases were excluded to form the perplexing test set. The EUS features of CD, PIL and ITB are different. The diagnostic classification method is reliable in the differential diagnosis of colorectal ulcerative diseases. Some minor language revisions needed.
