COMMENTS TO AUTHORS

The World Journal of Gastroenterology, Manuscript NO: 35624 Title: Stricturing Crohn's disease like colitis in a patient treated with belatacept By Dr. Anne Bozon, and colleagues. In this case report, the authors describe development of severe stricturing Crohn's disease like colitis in a patient with kidney allograft following treatment with belatacept a recombinant CTLA-4-Ig fusion protein. The report has high novelty, clinically important information, which is relevant in therapeutic settings. Notably, the authors have been very mindful of relevant ethical issues, all clearly addressed. This report should have a very broad appeal, gastroenterology, inflammatory bowel diseases and beyond. May I mention that the impact of your report should significantly benefit from minor language editing throughout by a native, but someone with adequate academic experience.

COMMENTS TO AUTHORS

Thanks for giving an opportunity to share this wonderful case. As you know, colon ulcer is very difficult to reach precise diagnosis. My major concern is how to differentiate with CMV colitis in this KT patient. PCR is not enough to exclude CMV colitis. Minor comments are some typo and miss hyphon. please correct them
