COMMENTS TO AUTHORS

Title is interesting . Personalized medicine has important role in treatment .It will be better rewrit the Title. My suggestion :Comparison the genomic variability of H. pylori isolates of gastric regions from Columbian population . Abstract is brief . It needs to edit methods part . Introduction part : This paragraph isnot clear and needs to rewrite . " There is no standard treatment for eradication, possibly because the gastric mucosa of a host can be colonized by multiple strains of H. pylori, and eventually coexist susceptible and resistant isolates to the antimicrobial[12], this phenomenon, not studied in Colombia difficult the eradication of the organism and does not allow to establish the therapeutic efficacy as a strategy for prevention of precursor lesions of GC". Indicate type of consent . result and discussion needs English polishing .
