COMMENTS TO AUTHORS

Although the authors recognize that "...our work has several limitations...", they are referring to only two. If they actually feel that there are no other limitations, then the word "several" should be replaced by the word "some". Indeed, the fact that there was no re-examination of the patients after one or more days represents a limitation on which the authors should dedicate further discussion. Most of the relevant studies have concluded that future studies with patient satisfaction may require an assessment some days after the day of endoscopy.

COMMENTS TO AUTHORS

A pleasure to read about this interesting topic regarding the patient/customer's perception of adequate sedation that corresponds to the use of drug. A discussion regarding cost comparison of the drugs may add another dimension to drug selection by the Endoscopist/Medical center. The limitations in the study design are concerning.

COMMENTS TO AUTHORS

addition of meperidine during colonoscopy/combined procedures doesnt evaluate the efficacy of only midazolam.
