COMMENTS TO AUTHORS

1. Page 6, line4-5; The authors described that "the left adrenal gland was resected from the pancreas". Did authors removed pancreas with the left adrenal gland or preserve the left adrenal gland? 2. I think this procedure cannot be always performed on the distal pancreatectomy. This procedure can be performed on the limited patients. The authors should refer to this limitation in detail. This new method can be an effective procedure "in some cases" with distal pancreatectomy.

COMMENTS TO AUTHORS

Congratulations for describing new innovative approach for prevention of post operative pancreatic fistula. One requires to study if there is any harmful effect of diversion of pancreatic juices into the stomach, though majority of the pancreatic flow will be into the duodenum. One needs to study more cases as leakage of of anastomosis between stomach and pancreas can be dangerous.
