COMMENTS TO AUTHORS

In this review, Authors analyzed the english Literature concerning the prevalence, classification, complications and long-term management of pseudopolyps (PP) in inflamamntory bowel diseases. The manuscript is interesting and well-written. Only a minor comment: I think that more discussion about the need and frequency of endoscopic follow-up of patients with PP could be useful, since malignant transformation of PP is considered an extremely rare event (as Authors stated in PP and colorectal cancer section).

COMMENTS TO AUTHORS

The authors of the manuscript "Pseudopolyps in Inflammatory Bowel Diseases, have we learned enough?" very carefully and clearly show the histology, location, prevalence of pseudopolyps in IBD and risk for colorectal cancer.... and other, references contains 89 items. According to my knowledge, the article adds nothing new in this topic. In my opinion the manuscript should be sent for journal about lowest IF.
