## COMMENTS TO AUTHORS

Very interesting study. In my opinion, this manuscript should be published in WJG.

## COMMENTS TO AUTHORS

Excellent study about the multi-cytokines profiling in serum for early detection of gastric cancer. In this study, the concentrations of CEA, CA724 and three kinds of cytokines in 176 gastric cancer patients, 117 atypical hyperplasia patients, and 204 healthy control individuals were used for building the diagnostic model, then 58 gastric cancer patients, 41 atypical hyperplasia patients, and 66 healthy control individuals were enrolled independently. The joint of the indicators were analyzed. The authors have built a diagnostic model included the CEA, CA724, IL-6, IL-8, and TNF- $\alpha$ . It may provide a potential assistant screening method for the early detection of gastric cancer. The study is well designed and the results are very interesting. I suggest to publish this manuscript in WJG after a minor language revision.
