SPECIFIC COMMENTS TO AUTHORS

GENERAL COMMENTS: I think it is a very interesting review It makes a great point about the unnecesary gastrectomy and lymph node dissection usually performed in ECG I think it would be interesting to cover more technical aspects about the sentinel node method; dye, nuclear medicine, IGC.

SPECIFIC COMMENTS: The

characteristics of early gastric cancer On the other hand, early gastric cancer is often associated with lymph-node metastasis (This should be edited to: rarely associated with...) Less invasive surgical treatment Although it is difficult to conclusively establish the minimal invasiveness of laparoscopic gastrectomy, it is suggested by the shorter time to first flatus and shorter hospital stays (This should be edited, because in RCT laparoscopic gastrectomy has proven to have lower postoperative morbidity). Limited surgery for early gastric cancer There are also some cases in which reflux esophagitis or gastric stasis are generated after PG. (This should be edited because this is an understatement, most patients with PG develop GERD for this reason this procedure has not gained wide acceptance, especially in the western hemisphere)
