### SPECIFIC COMMENTS TO AUTHORS

The authors have identified differentially expressed genes involved in the autophagy of pancreatic cancer by a gene expression microarray technique. Protein interaction networks were constructed and the functional clustering of differentially expressed

genes was carried out. Key interacting proteins or genes between modules were screened and evaluated by statistical methods, and the pathogenesis of pancreatic cancer was explored. Over all the study adds to scientific knowledge, however, few in vitro experiments on cell lines could further improve the impact of their conclusion.

### SPECIFIC COMMENTS TO AUTHORS

This is a very interesting study. However, the authors did not write this manuscript well. Especially, the abstract was written very bad. Of course, there are many english mistakes. Therefore, this reviewer can not accept its present form.
