SPECIFIC COMMENTS TO AUTHORS

This manuscript provides well justified opinion of the authors regarding tailored classification of portal vein thrombosis for liver transplantation. Based on the well-researched literature data, the authors propose a tailored classification of PVT. Namely, anatomical, physiological and non-physiological (Type I PVT, Type II and Type III). The tailored PVT classification allows better preoperative planning, forces transplant surgeons to pay greater attention to all strategies for portal reconstruction, and allows a better procurement of donor organs. This is quite useful and timely review. The manuscript, however, requires thorough review of the sentence composition and there are number of fused words throughout the text. Moreover, the abstract should be modified to include well defined conclusion.

SPECIFIC COMMENTS TO AUTHORS

Teng, Sun, Fu Tailored classification of portal vein thrombosis for liver transplantation: focus on strategy for portal vein inflow reconstruction Teng et al. review the (abovementioned) topic, proposing a tailored classification of portal vein thrombosis specific to liver transplantation with primary consideration strategies for portal vein inflow reconstruction. Of the >200 papers that I have reviewed, including for the AHA and AJP series, PNAS, CVR and similar, I have only ever seen 1 or 2 that were written where I could suggest no further changes or improvement. While this paper is in a tier 2 journal it is exceptionally well written with clear aims, reasoning and conclusions. I have no further comment on the manuscript.
