SPECIFIC COMMENTS TO AUTHORS

The study presented by the authors in the manuscript is extremely relevant, since it assesses for the first time the long-term change in the work productivity, daily activities and health related quality of life in patients with ulcerative colitis treated with golimumab in real clinical practice. The title, the abstract and the key words reflect the main subject, the main study results and the focus of the article, respectively. However, I consider it appropriate to slightly change the name to “Golimumab in real-world practice in patients with ulcerative colitis: 12-month results from a prospective, multicenter, non-interventional GO-CUTE study in Germany”. Study design and the methods used in the study are described in detail. The authors provided well-constructed and well-annotated tables and figures. The study used the correct methods of modern statistical analysis. The authors reasonably cite the latest, relevant and comprehensive references. Self-citation was appropriate (single reference, 3%). It is not very clear why the authors do not report the 24-month results that were presented at ECCO-2019

(https://academic.oup.com/ecco-jcc/article/13/Supplement_1/S337/5301088). It seems important as 24-month results not only show significant and clinically meaningful improvement, but also suggest a long-term (continuous) response to golimumab in terms of work productivity, activity and HRQoL in UC patients. Finally, the manuscript was prepared in a professional manner and certainly can be recommended for publication.
