SPECIFIC COMMENTS TO AUTHORS

The conclusion is not supported by the data. the study was a retrospective study on a few representative study population. Furthermore functional results should be better analyses by a manometric evaluation.

SPECIFIC COMMENTS TO AUTHORS

The bowel function is often neglected in patients underwent right-sided colectomy. In this study, the author investigated changes in bowel function and associated alterations in QOL after right-sided colectomy with D3 lymphadenectomy. Various factors and relationships between QOL and bowel functions were noted. It's helpful to the clinic. As the author realized, the cases in the study was limited. And it was reported in the manuscript, about 35-40% of the patients received chemotherapy, the chemotherapeutic regiments and its influence on bowel function should be described and analyzed.

SPECIFIC COMMENTS TO AUTHORS

The authors evaluated the bowel function and quality of life of right-sided colon cancer patients after minimally invasive colectomy with D3 lymphadenectomy, which is meaningful. However, there are some main issues here: 1, Pathological types of colon cancer affect the treatment and prognosis, as well as the life quality of the patients. So actually the authors are only talking about adenocarcinoma, this should be reflected in the title, conclusion and discussion. 2, Some patients need preoperative or postoperative chemotherapy due to the stages, in this paper, from table 2 it seems that there were no patients received preoperative chemotherapy? How many patients received postoperative chemotherapy, all of them? Among those who did or didn't receive chemotherapy, were there any differences in QOL and bowel function? 3, In table 5, why did the authors choose "six months after surgery"?
