The case is interesting. However, the manuscript needs improvement. 1. Did the patient give history of 'RADICAL' mastectomy? 2. In page 6, the patient is referred to as 'his' and not 'her' 3. The References section needs editing to standardize the format like VANCOUVER or other accepted style.

SPECIFIC COMMENTS TO AUTHORS

This is an interesting case of malignant glomus tumor. I appreciated the authors reporting this rare case for other medical personnel. I have some questions and suggestions for your manuscript. 1. In my opinion, the hemoglobin unit (in page 4) usually be gram/deciliter (g/dl). 2. Could you provide more information about staging study in this case after the first diagnosis of malignant glomus tumor from the first surgery. This is quite important information to determine the patient's prognosis. 3. Mitotic activity 400/50 HPFs is quite unusual, and it is not consistent with the H&E pictures (I totally agree that it showed malignant mesenchymal tumor, but 400/50 is quite impossible). Could you please check again? Moreover, I think cytologic atypia (in page 5) supposed to be "nuclear atypia". 4. In page 8, the original article of Folpe et al. was published in 2001. There are a little modification about atypical glomus tumor classification from WHO Classification of Tumours of Soft Tissue and Bone, and Enzinger and Weiss's Soft Tissue Tumors that worth to be mentioned, if possible. 5. Even you have English editing certificate for this manuscript, it has a lot of language errors, for example, his family (supposed to be "her") in page 6. Please check and rectify.
