SPECIFIC COMMENTS TO AUTHORS

The manuscript on adult pancreatoblastoma is very good. I found very instructional specifically because it is a rare event in adults. The author should expand the discussion on serum alpha fetoprotein (AFP), which can be used to monitor the effectiveness of treatment. It is indeed frequently elevated in children. In contrast, AFP is not consistently elevated in adults. Since AFP can be elevated in HCC of adults. It may be important to study this enzyme in detail and with non congenital tumors. The Japanese colleagues use also some isoenzymes and it may be important to discuss this aspect as well.

SPECIFIC COMMENTS TO AUTHORS

Excellent and unique area of research. Although, a little more extensive survey could have been better as no amount of survey is ever enough.
