SPECIFIC COMMENTS TO AUTHORS

This paper is a review article of gastric DLBCL and MALT lymphomas, which describe recent advances in their pathogenesis and treatment. Among the numerous papers on the gastric DLBCL and MALT lymphomas, the author(s) has selected the necessary articles suitable for discussing recent advances in their pathogenesis and treatment and explained them from his own perspective. Gastric DLBCL is a heterogeneous disease that is actually difficult to review, and I would like to pay tribute to the author(s) who compiled this educational review article. Well, there is one thing I would like to confirm with the author(s). *H. pylori* eradication has already been established for gastric MALT lymphoma, but do you think it is also effective for DLBCL? Only one line is mentioned in this paper with one article as a reference, but I wanted you to comment a little deeper. (The below paper also reported the effectiveness of *H. pylori* eradication for gastric DLBCL.) Even recently, there have been reports of successes and failures, and it seems that opinions are divided, so please tell us your thoughts. Finally, I highly appreciate this paper, and I hope that this article will be accepted with only a few revisions. Paydas S. Helicobacter pylori eradication in gastric diffuse large B cell lymphoma. World J Gastroenterol. 2015 Apr 7;21(13):3773-6. doi: 10.3748/wjg.v21.i13.3773. PMID: 25852262

SPECIFIC COMMENTS TO AUTHORS

Very elaborate. Few things I suggest: 1. Benefit of CHOP vs R-CHOP therapy and checkpoint inhibitors can be given in a table so that it will be easy for the readers to understand. 2. Role of radiation in primary gastric DLBCL and gastric MALToma not mentioned at all.

SPECIFIC COMMENTS TO AUTHORS

1. In the molecular pathogenesis, please check the spell of immune-privileged in the fifth row. 2. In my opinion, authors should add references as a review. 3. It is difficult for reviewer to point out the problem in the absence of line number. 4. An additional list of acronyms is more readable. 5. Insufficient evidence is listed to support immunochemotherapy (R-CHOP) is the optimal treatment for patients with DLBCL PGLs. 6. In the part of clinical studies, I don't understand what authors expressed in the first paragraph.
