

PEER-REVIEW REPORT

Name of journal: *World Journal of Gastroenterology*

Manuscript NO: 68403

Title: Role of magnifying narrow-band imaging endoscopy for diagnosis of *Helicobacter pylori* infection and gastric precancerous conditions: Few issues

Provenance and peer review: Invited manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 02954019

Position: Editorial Board

Academic degree: MD, PhD

Professional title: Associate Professor

Reviewer's Country/Territory: Japan

Author's Country/Territory: India

Manuscript submission date: 2021-06-02

Reviewer chosen by: AI Technique

Reviewer accepted review: 2021-06-03 00:24

Reviewer performed review: 2021-06-03 07:30

Review time: 7 Hours

SPECIFIC COMMENTS TO AUTHORS

Letter to the editor for the manuscript is usually rebuttal or approval for the results. However, I consider that the opinion of the author is vague, and authors merely "raise a few minor points for discussion". The discussion should be done clearly as for the result of the paper by Cho et al. Do authors agree with endoscopy by using NBI-M or not? I consider it should be discussed.

SPECIFIC COMMENTS TO AUTHORS

It is very necessary to explore and compare different inspection methods to improve the original technology. Narrow-band imaging (NBI) is an innovative optical method that facilitates detailed examination of the gastric mucosa. Cho et al have discussed it, and a large sample, multi-center study is still needed to evaluate the new method. I think it should not be prematurely evaluated from an economic point of view.
