SPECIFIC COMMENTS TO AUTHORS

It is a well-design study adding new information to the literature. Authors in a clear and simply way managed to give their results as well as the relative literature. I have no comments to make and in my opinion the article can be published unaltered.

SPECIFIC COMMENTS TO AUTHORS

Dear editors and authors! The manuscript "Comprehensively evaluate the short outcome of small bowel obstruction: a novel medical-economic score system" presents an up-to-date study in which promising data were obtained on the problem of adhesive and strangulation intestinal obstruction. The actual problem of urgent abdominal surgery. The manuscript does not require much correction. Tables, figures, references to literary data are used and given in the text by the authors correctly. Comment: in the material and methods, it is necessary to indicate the approaches that were used in the clinic to resolve intestinal obstruction and the outcomes of these interventions (conservative resolution of intestinal obstruction, surgical treatment - laparotomy or laparoscopic access), these are significant factors! both the immediate period and the long-term risk of recurrence of intestinal obstruction. The title, abstract, and keywords fully describe the content of the manuscript. The static analysis was carried out at a high level, as well as the qualitative scientific style of the authors' presentation of their research data. It would also be interesting to study statistical data on adhesive intestinal obstruction in China (data can be entered both in the Introduction and Discussion section).
