## SPECIFIC COMMENTS TO AUTHORS

The manuscript titled "Advancements in Medical Treatment for Pancreatic Neuroendocrine Tumors: A Beacon of Hope" provides a comprehensive overview of the current advancements in medical treatment strategies for pancreatic neuroendocrine tumors (Pan-NETs). The authors emphasize the importance of tailored approaches based on tumor subtypes and highlight the pivotal role of cytoreductive surgery and somatostatin analogues (SSAs) in managing these tumors. They also discuss palliative options such as molecular targeted therapy, peptide receptor radionuclide therapy, and chemotherapy for SSA-refractory cases. The review underscores the evolving landscape of Pan-NET treatment and explores promising avenues for future research in the field.
