PEER-REVIEW REPORT

Name of journal: World Journal of Gastroenterology

Manuscript NO: 89742

Title: Genetic risk stratification of inflammatory bowel disease-associated venous

thromboembolism (IBD-VTE): an Asian perspective

Provenance and peer review: Invited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 03795731 Position: Peer Reviewer Academic degree: PhD

Professional title: Associate Professor

Reviewer's Country/Territory: Croatia

Author's Country/Territory: Singapore

Manuscript submission date: 2023-11-11

Reviewer chosen by: Huo Liu

Reviewer accepted review: 2023-12-29 09:09

Reviewer performed review: 2024-01-04 11:45

Review time: 6 Days and 2 Hours

Scientific significance of the	[] Grade A: Excellent [Y] Grade B: Good [] Grade C: Fair
conclusion in this manuscript	[] Grade D: No scientific significance
	[] Grade A: Priority publishing [Y] Grade B: Minor language
Language quality	polishing [] Grade C: A great deal of language polishing []
	Grade D: Rejection
Conclusion	[] Accept (High priority) [] Accept (General priority)
	[Y] Minor revision [] Major revision [] Rejection
Re-review	[]Yes [Y]No
Peer-reviewer statements	Peer-Review: [Y] Anonymous [] Onymous
	Conflicts-of-Interest: [] Yes [Y] No

SPECIFIC COMMENTS TO AUTHORS

Patients with inflammatory bowel diseases are very complex patients. Thromboembolic disease is an additional complication of the basic disease, and it is very important to single out a group of patients who have this risk. Only large studies on different ethnic groups can help us answer that question. The author of the article explains it nicely, and the publication of his work would be attractive to readers
