SPECIFIC COMMENTS TO AUTHORS

This paper discusses wound healing between diabetic foot ulcer and non-coding RNAs. The review will be important for the wound healing of DFU in the future. I look forward to this field.

SPECIFIC COMMENTS TO AUTHORS

The subject of this review seems very interesting. However, the following points should be considered by the authors: 1. It is better for authors to add some figures to make their topics clearer, especially in Introduction and Section 1. 2. The genes' name should be appeared in *Italic* in tables. 3. I suggest authors add a list of abbreviations at the end of the paper.

SPECIFIC COMMENTS TO AUTHORS

This study summarized the role and intrinsic mechanisms of ncRNAs in diabetic wound healing and provided more potential targets for future studies on wound healing in patients with diabetes. However, As a review, the novelty of references is extremely important, and the references of this review are not novel enough. Whether the Circular RNAs of line 307 is the same as the above two subheadings to be abbreviated as circRNAs. Can Circular RNAs find more literature and then separate it into Inflammation, Proliferation and Regeneration as above
