## SPECIFIC COMMENTS TO AUTHORS

The authors presented an complete review regarding the prehabilitation program of overweight and obese patients with dysglycemia awaiting bariatric surgery. I recommend to use the forgoing article :Nematollahi, Mohammad Ali, et al. "Association and Predictive Capability of Body Composition and Diabetes Mellitus Using Artificial Intelligence: A cohort study." (2022). I also recommended t add some figure and/ tables, it may get your review more attractive for readers.

## SPECIFIC COMMENTS TO AUTHORS

Dear Authors,  I listed suggestions for the submitted manuscript.  - Title, change, "trend or need?"for "is a predicting the success of obesity treatment?"  -  Keywords, change, "Outcome" of "Diabetes".  - Abstract, mentions a calorie-restricted diet, a structured exercise program, psychological support and anti-obesity pharmacotherapy in the perioperative period of candidates for bariatric procedures. However, the discussion does not mention a point about psychological support. -Method, place at the end of each central point discussed, a table that summarizes the strengths.  - In the eleventh line of the Introduction, I suggest removing the word "mechanical".  - In the conclusion, mention that the degree of obesity and age influence the choice of treatment strategy or protocol.    Best regards,   Reviewer.
