SPECIFIC COMMENTS TO AUTHORS

The paper looks good and interesting, however there are two comments as follows: 1. There are several grammatical and spelling mistakes in the text that should be noticed by the authors. 2. Since laser and stem cells may be considered as a combination therapy in diabetic foot ulcers, I suggest that the authors provide a brief discussion of their potential applications.

SPECIFIC COMMENTS TO AUTHORS

This review mainly talked about the etiopathogenesis, classification and treatments of DFU. The whole manuscript need largely re-editting. My comments are as follows: 1. The title "Diabetic Foot Ulcers; A devastating complication of Diabetes Mellitus continues non- stop in spite of new medical treatment modalities" in fact not in accordance with the main content of the manuscript. And I don't think the ";" is proper in the title; 2. It is a good topic about DFU, however, the first two part about the "Pathophysiology" and "Classifications of Foot Ulcers" are well known in the literatures and no new data about this therefore I think these part should be very conclusive instead of in very detail. Furthermore, the author should make the subtile more logical; 3. The main part is the third part and there are many new methods nowadays including LLLT, platelet concentrate and autologous stem cell etc al. I think the authors should include these types of treatment. And furthermore, I think it is better to write this part more logically. eg: basic therapy including glycemic control, anti-infection, improved blood supply etc al. then following with other specific therapy.
