COMMENTS TO AUTHORS

This is an interesting review focusing on the role of trace element on diabetic cardiomyopathy. However, the reviewer has the following suggestions: 1. The review only includes four metals, which is too narrow. In fact, several other metals also affect the heart under diabetic conditions, for instance, iron, copper and magnesium. Therefore, the authors should include these metals too. 2. For zinc description, the first paragraph should be divided into a couple of small paragraphs, instead of one long paragraph. 3. Tungstate description is also one paragraph, which should be divided into 2 or 3 small paragraphs. 4. In the figure legends, the data resource to support the illustration should be indicated.

COMMENTS TO AUTHORS

In this manuscript by Ozturk et al, the authors have reviewed the role of a few trace elements in diabetic cardiomyopathy. This article has been well-designed in terms of its format and is very informative. However, at some places, the language can be improved to make it easy to understand.
