COMMENTS TO AUTHORS

The author summarized well the beneficial effects of WAT and their clinical implications. However, several minor edits should be concerned. First, many sentences elsewhere is not clear whether the previous studies are animal model-based studies or clinical human data (i.e., page 11-12). This will make readers to misunderstand the beneficial effects of WAT as being clinically applicable. Second, in the section of "Available therapies", description of the current medicinal treatment of diabetes is too negative. The description of this section should be balanced. Another minor revision is: typos in page 11, line 2, underlyong should be changed to "underlying".
