COMMENTS TO AUTHORS

In this minireview the authors highlighted the current understanding of LADA. The detection of C-peptide levels and GAD autoantibodies is strongly recommended for confirmatory diagnosis of LADA. This article is helpful for the physicians in early diagnosis and correct timing for insulin treatment

COMMENTS TO AUTHORS

On page 4 line 27 "I was proposed ..." is difficult to understand. Is it to mean "it was proposed that ..."? How long is the therapeutic window between the appearance of GAD antibody and insulin dependence on average? Should we start insulin treatment as soon as we detect GAD antibody in a seemingly type 2 diabetes?

COMMENTS TO AUTHORS

Nice review of data confirming a separate entity of LADA as a disease. The included information will be extremely useful for endocrinologists, especially those dealing with diabetic human subjects
