COMMENTS TO AUTHORS

This is a comprehensive review for handling diabetic foot ulcer. The effect of EGF may be overemphasized. According to a study in Cuba, local injection of 75 micro gram of EGF was needed (Fernandez-Montequin Int Wound J 6: 432). The style of the references is not as expected and should be corrected.

COMMENTS TO AUTHORS

Consider using wound care instead of dressing.

Most of the references are old except couple.

Would suggest using latest references.

Please label the pictures.

Moreover are the pictures authors own or are they reproduced?

COMMENTS TO AUTHORS

Good work. One 16th page about wet to dry you put as best which is not right. we dont use it in UK. It may be Cheapest but not best. Hydrocolloid is not suitable for plantar ulcers as the dressings move because of planter pressures and shearing.
