## COMMENTS TO AUTHORS

Congratulations on discussing a successful transition model from pediatric to adult diabetes care. 1. Since the manuscript is submitted to World Journal of Diabetes, a brief overview of the global practices in this transition and the country specific existing model of care may be discussed. 2. Though the prevalence of diabetes in pediatric population is being discussed, the country name is missing. 3. The age cut off for pediatrics is different in different countries. In discussing the transition from pediatrics to adult care, the age specification in United Kingdom need to be emphasized. 4. Since the subject involves psychosocial requirements, what will be the role of a counsellor/psychologist being actively involved in the transition clinics? 5. Will this model require additional resources? Do the authors believe that the model can be easily replicated in clinics across the globe?

## COMMENTS TO AUTHORS

This manuscript is a comprehensive review of the challenges encountered during the transition of diabetes care from paediatric to adult diabetes services. The clinical topic is very important, however, several parts are difficult to understand. It would be better to add the summery figure or table in the manuscript.
