COMMENTS TO AUTHORS

Appropriate collection and analysis of relevant information have been applied, whereas the conclusions are persuasively supported by data presentation and interpretation. However, the authors should make suggestions on the design of studies that could provide direct evidence on the pathogenetic role of (P)RR-mediated fetal-maternal interaction in gestatioanl diabetes mellitus.

COMMENTS TO AUTHORS

It's a well-written article. No specific comments. "b-cell" may be better to be replaced with β -cell or beta cell in several places.
